Job Description

Title: Ruby on Rail Developer
Location: Pune, India

Overview
appOrbit is an emerging startup enabling customers accelerate the digital transformation of their businesses. Our vision is to make it possible for enterprises to deploy and manage end to end life cycle of any application (legacy, cloud native, windows, linux) on any infrastructure (virtual machines, containers, bare-metal) across any cloud (public, private, hybrid). Our platform is already helping several dozen customers realize this vision.

appOrbit is looking for developers who love developing and building next generation cloud solutions. You will have the opportunity to engineer solutions using the latest container, container orchestration and container monitoring technologies. You will work closely with the open source communities and be driving the still nascent technology around containers.

Responsibilities:
- Write clean, maintainable and efficient code
- Design robust, scalable and secure features
- Contribute in all phases of the development lifecycle
- Follow best practices (test-driven development, continuous integration, SCRUM, refactoring, code standards)
- Drive continuous adoption and integration of relevant new technologies into design
- Proven Communication skills by means of presentations or conference speaking engagements
- Ensure technical expectations of deliverables are met.
- Maintains strong expertise and knowledge of current and emerging technologies and products.

Desired Skills:
- Bachelor's degree or higher in Computer Science or related field
- 3+ years of development experience
- Must have experience in developing Cutting edge applications with Ruby On Rails.
- Should have good knowledge and work experience in REST API implementations, JSON format handling (from within RoR), RoR rails cache, sessions, multi-threading etc.
- Must have experience in developing RoR controllers, helpers and integrating with some of the popular gems (such as devise, pundit etc.)
- Should have a sound experience in developing scalable / distributed SaaS app.
- Should be able to handle server side/client side, RDBMS , noSQL , MySQL and rabbitmq message queues as needed - GTH.
- Expert in Agile and Test Driven Development models
- Proficiency Using git - code check in and review process

Preferred Skills:

- Experience in Enterprise apps and DB configuration management is a Plus
- Proficiency in Linux & Windows - production / development environments preferred.
- Experience with cloud based deployment environments like AWS, Openstack, Rackspace,Azure
- Some experience in CSS, JQuery & DHTML is desirable.
- Experience in Golang is a plus.

Benefits:

- Fun, creative and fast-paced working environment
- Terrific medical and accident insurance plans
- Pantry stocked with snacks and beverages
- Flexible time-off with generous paid holidays
